

freezer rapid doors

Heated door frame prevents ice buildup

Induction loops activating rapid door

Freezer rapid door with control box

- Provides quick and convenient access to the freezer
- Minimises freezer cold air loss and refrigeration costs
- Time proven design reliable and cost effective operation
- Innovative design features incorporating unique technologies
- Operates in temperature extremes from freezer to ambient

Australian
Made

The Hi-Tech Cost Effective Solution To Freezer Access

opening freezer doors fast

Triple insulated curtain for maximum insulation opened by lifting straps in a folding and stacking action

Inside of freezer operating at temperatures down to -35 C with the door opening protected by bollards

Exceptional Design Features

- Triple insulated curtain for maximum insulation
- High speed operation 1 to 2.5 metres per second
- Fibreglass curtain stiffeners rebound on impact
- Fully insulated doorframe with heaters elements
- Constant temperature to prevent ice buildup
- Individual curtain segments easily replaced
- Sophisticated microprocessor controlled functions
- Displays show the doors operation and status
- Low friction guides ensures a good curtain seal
- High quality industrial rated components
- Special low temperature industrial rated drive
- Exclusive active and passive safety features
- Exceeds new international safety standards

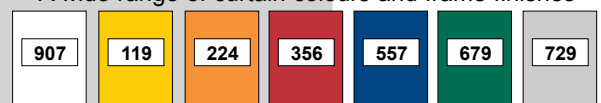

Activated by induction loops door opens in a folding action

Optional Functionality

- Power supply 415 V three phase or 240 V single phase
- Constant or variable speed drive and door operation
- Detectors induction loops, remote control, motion detectors, photocells, push button and pull switch
- Securities safety edge, floor marking and lights
- Auto open or continuing operation when the power fails
- Dual open heights and other function specific controls

A wide range of curtain colours and frame finishes
